Description

need to create a "hand" mouse cursor tool for kepler similar to photoshop or illustrator so you can move the viewing window around with the mouse cursor. this would be more convenient than using the smaller viewing window in the lower left to navigate a large pipeline. It would also be nice to have a zoom in and zoom out mouse cursor where if you clicked zoom with the mouse, it would zoom and recenter on the mouse click.

I've never understood why the canvas doesn't have scroll bars. Can we add these too when the document overflows the visible area?

#2 - 10/12/2004 10:58 AM - Chad Berkley

The vergil canvas now has scrollbars that are visible when the size of the canvas is bigger than the size of the pane. I don't think we need a hand tool now so I will close this bug.
