Description

If you resize the editor screen, it takes a very long time to redraw. It seems like it is doing the entire dtd parse over again. I don't know if that is really the case but the amount of time it takes to resize is roughly proportional to the time it originally takes to open. it would be nice if you could quickly resize the window to meet your needs.

History

#1 - 01/14/2002 07:26 PM - Dan Higgins

Most of the time in opening/resizing is due to the creation of the recursive panel display on the right side of the editor. This can be especially slow for large documents.

#2 - 02/26/2002 02:34 PM - Dan Higgins

Resizing delays due to recalculation of nested panels. A change in the code now resizes immediately and then updates when the nested panels have been regenerated. The original delay was quite slow only when the document was quite large.

Will leave this bug open in hope of speeding up more.

#3 - 03/12/2002 11:38 AM - Dan Higgins

Editor resizing speeded up; first displayed without changing layout. A second process then redraws to better match the new size when finished.
