Kepler - Bug #4003

Support for non-GUI Kepler installer.

04/21/2009 09:12 AM - jianwu jianwu

Target version:	3.X.Y	**Spent time:**	0.00 hour
Bugzilla-Id:	4003		

Description

Many users need to install Kepler on a cluster or other distributed environments where they do not have a GUI. So it would be nice if we support Kepler no-GUI installation. An ideal way is to provide a Kepler rpm package.

One workaround for this is to have IzPack use

<panel classname="FinishPanel"/>

instead of

<panel classname="SimpleFinishPanel"/>

FinishPanel will create a auto-install.xml file which can be run
with
java -jar installer.jar auto-install.xml

See

http://izpack.org/documentation/advanced-features.html#automated-installers

For information about building a Kepler installer, see
https://kepler-project.org/developers/teams/build/building-kepler-installers/?searchterm=installer
