Metacat - Bug #3217

Create simple tranformations to present permissions error messages in styled format

04/10/2008 11:19 AM - Shaun Walbridge

Description

Currently permissions errors are rendered to the client as raw XML documents, which will be handled differently on a per-browser basis, and are visually distinct from our skinned pages. A simple solution would be to provide a basic transformation to present these messages within the skinned format.

Example 'permission denied' page:
http://dev.nceas.ucsb.edu/knb/metacat?action=read&qformat=sanparks&docid=judithk.335.1

It would be useful to have the error page for insufficient privileges also provide a login prompt so that one could immediately login and go straight to the desired page.
