Category:	eml - general bugs	**Estimated time:**	0.00 hour
Target version:	EML2.2.0	**Spent time:**	0.00 hour
Bugzilla-Id:			

Description

Consider adding an optional top level field to eml-dataset to provide this, possibly something like:

/eml/dataset/dataUsageCitation which would be of type CitationType

See discussion on eml-dev regarding this issue:
http://lists.nceas.ucsb.edu/ecoinformatics/pipermail/eml-dev/2013-December/002004.html

History

#1 - 12/11/2013 10:41 AM - Matt Jones

Here's a proposed element definition for the /eml/dataset/citation field. I have preliminarily checked this into EML trunk (r2344) for incorporation in the next release. As it is optional and at the end of the dataset fields, it should be fully backward compatible with prior versions of EML.

```
<xs:element name="citation" type="cit:CitationType" minOccurs="0" maxOccurs="unbounded">
  <xs:annotation>
    <xs:appinfo>
       <doc:tooltip>Data Citation</doc:tooltip>
       <doc:summary>A citation to articles or products in which the
       dataset is used or referenced.</doc:summary>
       <doc:description>A citation to articles or products in which the
       dataset is used or referenced. The citation element contains
       general information about a literature resource that has used or
       references this dataset resource.
       </doc:description>
    </xs:appinfo>
  </xs:annotation>
</xs:element>
```
