Jalama - Bug #1018

modify morpho data package wizard code for reuse with jalama

03/21/2003 02:19 PM - Chris Jones

Description

The structural differences between eml2beta6 and eml2 dictate that the data package wizard code using jalama interfaces for eml2beta6 must make multiple requests to the jalama controller to manipulate the DOM tree sent to it. The reason for this is that Jalama handles ONE DOM tree at a time, whereas eml2beta6 packages are comprised of multiple dom trees (in essence).

History

#1 - 11/25/2000 01:03 PM - Matthew Brooke

latest version of data pkg wizard actually produces an EML2 document, so this needs to be split up into modules after creation, if we still need to support beta 6

#2 - 02/23/2004 04:26 PM - Matthew Brooke

started at eml2 support in morpho. This bug therefore superseded, unless we ever need to go back and implement an eml beta 6 wizard
