

Metacat - Bug #1053

'ampersand' (&) problem in ResultSet

04/30/2003 04:54 PM - Dan Higgins

Description

One of Christy's students entered an ampersand ('&') in the dataPackage name field for a package and discovered that this created a problem. '&' is converted to & by Morpho and submission to metacat works OK as do purely local searches on Morpho.

An error message about 'not having entity info following the &' occurs, however when Metacat tries to build a resultSet document from the package with the '&' in the package name! This keeps a user from doing any searches for their own docs on metacat!

History

#1 - 04/30/2003 06:14 PM - Jing Tao

In extended query, the value for return fields need to be normalized(for example, '&' should be replaced by "&". So the value can be parsed by SAX parser. Now it works fine.
