

Metacat - Bug #110

foreign keys to xml_catalog

08/31/2000 12:58 PM - Matt Jones

Description

The current uses of public identifiers in the xml_documents and xml_revisions tables do not explicitly reference xml_catalog with a foreign key. We would benefit if they did, because then we would be assured that each strongly typed document in the database was known to us in xml_catalog, which should be a requirement of being a strongly-typed document. Because the FK would need to point at xml_catalog.catalog_id, we would need a new field in xml_documents, and it would have to be synchronized with the xml_documents.docid.

History

#1 - 02/21/2001 10:39 AM - Jivka Bojilova

DONE

catalog_id attr has been added to xml_documents and xml_revisions as FK to xml_catalog. All "typed" documents are related to the catalog by this attribute.
