#### Description

REOT feedback: export and import for external data manipulation:

Despite the awesome data editing functionality now incorporated into morpho, soem users expressed a desire to be able to export data tables for external processing in other programs, and then import them again afterwards. The import step would include validation to ensure agreement with the existing metadata, and would facilitate resolution of any inconsistencies (either manually or automatically or some combination thereof)

there are potential implications with regard to undocumented changes etc which would also need to be considered
