Bugzilla-Id:	1112		

Description

on linux, RH 7.x - 9.0, when the user closes the jalama java window by clicking the upper-right 'x', the app dumps core instead of exiting normally. On the mac and windows I believe that this is not the case -- the app exists normally. The error message at core dump is:

```
An unexpected exception has been detected in native code outside the VM.
Unexpected Signal : 11 occurred at PC=0x4DA05FD3
Function=AddNullTerminator__FR5nsStr+0x4B
Library=/home/harris/jalama/gnu/gre/libxpcom.so
```

Current Java thread:

```
at
org.mozilla.webclient.wrapper_native.WindowControlImpl.nativeDestroyInitContext(Native
Method)
at
org.mozilla.webclient.wrapper_native.NativeEventThread.run(NativeEventThread.java:233)
- locked <0x44490390> (a org.mozilla.webclient.wrapper_native.NativeEventThread)
```

History

#1 - 03/10/2005 01:42 PM - John Harris

We are no longer using webclient so this bug is no longer relevant.

#2 - 03/27/2013 02:16 PM - Redmine Admin

Original Bugzilla ID was 1112
