Description			

History

#1 - 07/22/2003 02:35 PM - Michael Lee

The logging system is really basic right now. I'd like to see timestamps added and be able to somehow view a log that is filtered to just the more major events or filter it by user. Also, it'd be nice to see which users were using each process that was going on.

#2 - 11/05/2003 05:17 PM - Gabriel Farrell

Mark has already started work on this so reassigning

#3 - 11/10/2003 03:48 PM - P. Anderson

let me at 'em

#4 - 02/24/2004 03:49 PM - Michael Lee

This was said to have been completed in our last VegBank meeting, so I am resolving this. Mark should overrule me if necessary.

#5 - 02/25/2004 08:18 AM - P. Anderson

Gabe added the log4j functionality which is much more powerful but also needs additional tweaking. I'm reopening this bug.

#6 - 02/27/2004 01:49 PM - Gabriel Farrell

Log4j is in place now (via commons logging). There is much that can be done to exploit it.

Right now we can send it prioritys of messages, format the messages and output to a rolling log file if we want.

To trully exploit we will need the client code to send it own messages rather than via our LogUtility wrapper. Then we can set different priority levels for different components of vegbank which could be usefull.

#7 - 05/04/2004 02:31 PM - P. Anderson

Enough of the code in ui.struts and common.utility has been transitioned to use log4j instead of LogUtility that I am closing this bug again. Plus I am continuing to change new files as I go since it doesn't hurt to use LogUtility (it just doesn't help as much as using log4j).
