#### Description

The current registry form contains a single field for the name of the person providing the metadata. This is currently incorrectly shoehorned into 'surName' when in fact it often includes a givenName. To fix this, need to:

- 1) Change the single field into two fields (providerGivenName and providerSurName) in the template files
- 2) change the validation method to check that these are provided
- 3) change the 'createXML' method to properly format these as givenName and surName

#### History

##### #1 - 01/06/2004 01:49 PM - Saurabh Garg

This bug has been fixed earlier.
