| Description | | | |
| Need a data set parser to extract relevant file- and variable- information for MARINE datasets. The parser should generate XML output that is suitable for inclusion in eml-file and eml-variable metadata modules, and that will help speed data entry for the MARINE datasets. This may be implemented in SAS. | | | |

History

#1 - 07/12/2001 05:11 PM - Matt Jones

Changed milestone for a number of morpho features that will not be able to be completed by Beta 1 (ESA). Delaying these features to Beta 2.

#2 - 08/31/2001 09:30 AM - Matt Jones

Not going to fix this because the more general data set parser is nearing completion (see bug 116).
