

EML - Bug #1153

dateTimeDomain element should be optional

09/23/2003 08:20 PM - Matthew Brooke

Status:	Resolved	Start date:	09/23/2003
Priority:	Normal	Due date:

Target version:	EML2.0.1	Spent time:	0.00 hour
Bugzilla-Id:	1153		
Description			
Under eml:eml/dataset/dataTable/attributeList/attribute/measurementScale/datetime, there is a sequence of 3 required sub-elements: - formatString - dateTimePrecision - dateTimeDomain ...but all the content of dateTimeDomain is optional, so to get a valid document, it is necessary to add an empty dateTimeDomain element. Presumably, to avoid this, the dateTimeDomain element should be optional			

History

#1 - 10/28/2003 12:38 PM - Matt Jones

Made the dateTimeDomain element optional. Note that this is fine for
dateTimeDomain because bounds is optional and the domain is implied by the
datetime scale. For other scales like ratio the domain continues to be required.

FIXED.
