<b>Description</b>			
<p>During Seattle, we redefined the WSDL interfaces for the query operations for the level III operations. They now should contain:</p> <p>Level III ----- FileHandle open(EcoGridIdentifier, ProxyCertificate) MimeType read(FileHandle, Length, ProxyCertificate) void seek(FileHandle, Offset) void close(FileHandle, ProxyCertificate)</p> <p>MimeType logicalQuery(EcoGridIdentifier, DataQueryType) -- this operation probably needs to be renamed</p> <p>For all of these methods, if "ProxyCertificate" is null, then the method should be executed anonymously with only the rights of an anonymous user.</p> <p>Peter agreed to tackle these revisions, and we agreed that these are only initial thoughts on these more advanced interfaces, and that they would need to be revised as we gain more experience later.</p>
