<b>Bugzilla-Id:</b>	1167		

#### Description

Service data schema for query level I, II, III services and application serviceData, including references to an analysis ontology. Each service on the EcoGrid will provide this service data, which will allow clients to locate relevant services for their analytical and data gathering needs. The analysis ontology will be especially useful to find, for example, all 'GARP' services or all 'analysis of variance' services. These schemas should use inheritance for upper common parts -- e.g., data services and analytical services would be described the same way but have a few special fields depending on the type of service.
