Description

Need a new HTML interface for the marine servlet that allows construction of a simple boolean expression for searching. The user should be able to pick from a list of available fields, and incrementally add additional query terms to the query. All of the terms in the query would either be ANDed or ORed, implying that nested booleans would not be generated from this type of query (no paranthetical grouping).

History

#1 - 07/23/2001 11:16 AM - Matt Jones

Changed milestone for several bugs. Some of these we should consider marking INVALID or WONTFIX.

#2 - 09/17/2001 10:19 AM - Matt Jones

WONTFIX. We've changed the way queries canbe submitted to metacat, and now the form fields implictly allow creation of boolean queries without the user having to know about it.
