This is working with 1.0.2 and allows uploading of zip files.

Retification will build on the existing code base here. I refactored some of this in anticipation of that work and but there is one cool refactoring that would clean this up a lot and make further work easier.

Haven't the design clear yet but a props file generated from model XML that configures special needs of each entity, i.e. does it need special perms to load, what are the children allowed to load, must match existing entry in db.

#4 - 01/31/2005 02:53 PM - Michael Lee

changed from components that are to be deleted to "misc" so that bugs don't get deleted with component. Sorry for all the email.
