

Metacat - Bug #1230

move metacat.properties out of jar file

12/05/2003 12:56 PM - Matt Jones

<b>Description</b> The current configuration file for metacat (metacat.properties) is installed inside of the metacat.jar JAR file. This makes changing the configuration difficult for most users. Need to move it out of the jar, probably to a location like \${context}/WEB-INF/metacat.properties. I have started code to accomplish this change.

FIXED. The properties file is now installed in the WEB-INF directory rather than the jar file. This uses a new Options class found in the utilities module, so the new version of utilities needs to ship with this release of metacat. You still just call MetaCatUtil.getOption(String optionName) to get a value, so the rest of metacat won't notice the change.
