Bugzilla-Id:	1234		
Description public static AbstractDataPackage getDataPackage(Node node) method should be changed to inspect the passed DOM ("node" param) in order to find the value for the "doctype" that should be used for the "dp.grammar" setting. For now, it is hardcoded for eml2			

History

#1 - 12/29/2003 10:52 AM - Dan Higgins

The getDataPackage(Node node) method in DataPackageFactory class has been modified to actually check the DOM indicated by the node parameter to determine the grammar setting (i.e. the docType). Currently only eml2.0.0 doctypes are handled, but it is planned that the DataPackageFactory will be modified as new doctypes are created.
