

Morpho - Bug #1239

morpho fails when lastId gets out of sync

12/23/2003 05:26 PM - David Kaplan

Description			
I recently had to delete all the profile information that was contained in .morpho. A new .morpho was created when I restarted morpho, but when I went to "Add documentation" to a package it failed stating that id "dmk.1" was in use already. The only way to fix this was to modify by hand the lastid in dmk.xml

The setLastID method in the Morpho class is supposed to check with metacat for the last ID. It seems to work fine for me when the entire .morpho directory is discarded.

Need to look into this for more details.

#2 - 12/24/2003 11:20 AM - David Kaplan

I did delete the entire .morpho directory when this problem occurred. When does it run setlastid? If it is only run when the original profile is created then this could be part of the problem. I chose to skip login because I have to change the metacat repository that it looks at before proceeding. Perhaps this is the problem and why you don't see it. For you, the default repository works, but for me it fails.

Sounds like it correctly checked for the last id, but on a different server. At any rate, this is all different in v 2.0.0 not to mention ther large amount of identifier conflict resolution code that now exists.
