Description

Metadisplay

Clicking on the Data Table column headers causes the metadisplay to show the correct metadata, but clicking a couple of column headers and then clicking the "back" button in metadisplay causes an index out of bounds exception, and the debug message: "Can't handle multiple column selections yet!!"

In DataViewContainerPanel line 667, this returns null sometimes:

```
String selectedAttribs
    = container.getMetaDisplayInterface().getTransformerProperty(
        XMLTransformer.SELECTED_ATTRIBS_XSLPROP);
```

...so I'm guessing that the history stack/transformer properties are not being managed properly in metadisplay, since the "SELECTED_ATTRIBS_XSLPROP" seems to be getting corrupted/lost?

History

#1 - 01/06/2004 01:59 PM - Perumal Sambasivam

exception was due to selecting the incorrect column. now, the back button seems to work ok. The current entityID obtained is still null, but its not necessary.
