Description

These are issues I encountered while test driving the 1.5alpha1 release.

- 1) Remove "Conversion to EML2 Complete" dialog message
- 2) Change "Associate Party" => "Associated Party" in eml stylesheets
- 3) Why is "Thesaurus" set to nrs.11.2 during conversion? Remove thesaurus field if there's no logical value to be placed there.
- 4) Can the tree editor use the party screen for metadataProvider like it does for creator? How about associatedParty?
- 5) In TIW, "Help" button opens window that is scrolled to the bottom -- put cursor at top before showing it
- 6) In TIW "Help" screen, change phrase "interval for most some purposes" to "interval for some purposes"
- 7) When a package that is changed is closed (using window close control), need to prompt user to save or discard changes so they don't lose data
- 8) DPW first screen, add space before "(EML)"
- 9) On DPW "Define Keyword Set" dialog, disable label and textfield for thesaurus unless "These keywords are chosen from a predefined list" is selected. If disabling isn't visually distinctive, possibly hide the field
- 10) In DPW "Research Project", when adding personnel I chose an existing person from the list, and when I clicked ok the party did not show up in the list of personnel. Even entering a person manually after that did not result in an entry in the list. This is probably a bug.
- 11) DPW Step 11...also summarize how to add a new table to the package after they click finish.
- 12) Access rule for "public" is not showing up properly in the metadata display screens or the exported metadata.html file. Probably a problem in the xslt.

History

#1 - 12/29/2003 01:00 PM - Dan Higgins

1), 3), and 4) bugs fixed. (Higgins)

#2 - 12/29/2003 01:44 PM - Dan Higgins

5) and 6) fixed

#3 - 12/29/2003 01:50 PM - Dan Higgins

2) fixed

#4 - 12/30/2003 09:20 AM - Saurabh Garg

fixed 8 and 9

in 10: Entering a person manually now adds it to the list. If picked from the list, it doesn't add to the list because it is supposed to be a reference. This can be changed if wanted.

#5 - 12/30/2003 09:35 AM - Matt Jones

Regarding 10) I think that even references should show up in the list, as the user needs some visual indication that the entry exists, and needs a way to delete the entry if they decide to. The only problem comes with editing: you can either a) disable editing for references, or b) enable editing but edit the

original party entry wherever it exists. I prefer b) because it gives the user more options, but you'll need to indicate to them that changing the party's info on the reference screen will effectively change it throughout the document.

#6 - 12/30/2003 11:15 AM - Dan Higgins

Item 7) has been fixed. Note that when a datapackage is changed and not yet saved, its location string is set to "" (i.e. an empty string). The 'close' method in MorphoFrame now checks the location variable for the current AbstractDataPackage and asks the user if he/she wants to 'Save' if package has not been saved.

#7 - 01/05/2004 03:04 PM - Matthew Brooke

11) fixed

#8 - 02/19/2004 10:05 AM - Saurabh Garg

12) moved to bug# 1209 and discussion on 10) moved to bug# 669.

As rest everything else is fixed, I am closing this bug.
