Morpho - Bug #1282

Suggest closing earlier data package windows when a new data package window is opened

01/23/2004 02:54 PM - Saurabh Garg

Description

Reported in morpho-feedback-20040122.doc in /doc/devs/ by Rick Reeves

Using the New Datapackage Wizard: When I finish entering one metadata set, and want to start entering a new set, the only way seems to be to select File/New Data Package option. Selecting this option invokes a new Datapackage Wizard window; however, the window used to enter the last metadata set remains open directly underneath the 'new' window. This leads to confusion if several metadata sets are entered sequentially. Suggest closing each window AFTER prompting user to explicitly save (by specifying a pathname, etc) the corresponding metadata set.

History

#1 - 12/15/2004 03:26 PM - Andrea Andrea

As long as it doesn't freeze up Morpho, it could be useful to have more than one data package open at the same time.
