Description

In New Datatable Wizard / Data Information screen / Attribute list control,
when using the Move Up or Move Down buttons, user needs to re-highlight the
item being moved after each single movement. Would be more convenient if the
item stayed highlighted (and movable) until the user selected another item
or closed the window. Especially if the item needed to be moved more than

When using New Datatable Wizard / Data Information Screen and populating the
Attribute list with table column attributes: When using the Move Up / Move Down
buttons, the user must re-highlight the item being moved after each single
movement / button click. Would be faster if the item stayed highlighted and
movable until the user selected another item OR moved to another window.
