Description

The project list structure needs to be explained. So a legend is needed for decoding entries like Alroy: FossilRecord (NCEAS 2088)

Also in project list, the interface needs to be changed. There should be two lists. One with the list of projects and other empty. The user should be able to add and remove project names from the second list.

Comments from Rick:

When selecting an NCEAS Project entry, it is tedious to scroll down through all of the entries to find the proper selection (if any). Suggest some sort of search mechanism or auto-field completion feature to help user drill down to the correct selection.
