<b>Description</b>			
<p>below is a list of GUI enhancements that were noted at the SEV meeting. Each needs to be addressed before the interface is really usable. Some of these bugs might be Mac specific but most of them are not.</p> <ul style="list-style-type: none"><li>--move actor config to one dialog</li><li>--make actor lib searchable</li><li>--add metadata to actors for different categorization</li><li>--make the actor lib re order itself when you choose a different director...it should only show actors that work with that director</li><li>--allow output to be viewed on the vergil canvas</li><li>--add user documentation to each actor</li><li>--make it easier to expose parameters to the run window</li><li>--allow actors to have aliases</li><li>--remove functionality that domains scientists would not use (EE stuff)</li><li>--change paste behavior to force pasted elements to be in the current clipping view instead of the middle of the canvas</li><li>--allow all ports to display port name or have arcs display the name of the values passed</li><li>--when you add a port, don't randomly select the cardinal direction...inputs should be west, outputs east BY DEFAULT</li><li>--make dialogs resize based on screen resolution</li><li>--the zoom buttons are totally unintuitive. they need new icons</li><li>--allow ampersands in annotations</li></ul>
