#### Description

The new datapackage wizard in Morpho 1.5 adds a number of text input fields. Previous experience has indicated that we need to scan these inputs for illegal characters (using a method like 'normalize') to create character entities in the XML for special characters sometime pasted from Word or PDF files.

A quick check indicates that we have not been doing this. We need to check all the input fields to make sure that illegal characters are handled properly

#### History

##### #1 - 02/23/2004 09:56 AM - Dan Higgins

Discussions with Matthew Brooke have revealed that 'normalization' IS already done in the new wizard routines (in the 'addPageDataToResultsMap' method of the 'WizardContainerFrame' class.
