Morpho - Bug #1358

How to handle multiple repeated delimiters

03/02/2004 03:08 PM - Dan Higgins

Description

Peru has pointed out that there is apparently no place in eml to save the 'Multiple repeated delimiter' information collected by the TextImportWizard.

Most probably use - multiple 'spaces'.

One possible solution: just replace the multiple delimiters with a single one when the data file is saved. ???

History

#1 - 04/04/2004 01:20 PM - Dan Higgins

problem will be fixed when a new eml update includes information of this type.

#2 - 04/16/2004 03:29 PM - Dan Higgins

for eml2.0.0 added 'additionalMetadata' tag with 'describes' pointed to a physical' id of the table and a tag (<consecutiveDelimiters>) with boolean 'true' if we are to ignore consecutive delimiters.

The method do look for this information in in the EML200DataPackage class (virtual in AbstractDataPackage) so we can change easily for updated emls that have a tag elsewhere.
