Description

The current morpho dialogs for geographic coverage (Documentation|Geographic Coverage...) and temporal coverage (Documentation|Temporal Coverage...) cause the package revision number to be incremented when the user presses "OK". This is incorrect behavior. When the user presses cancel, no changes should be made to the metadata regardless of what the user has done in the window. If the user presses "OK", the changes the user has made should be made in a temporary metadata file, but the revision number of the package should NOT be incremented until the user hits "File|Save...". Up until that point, the user should be able to discard all changes to the package by closing the package without saving (ie, changes to the package must require an explicit "File|Save..." before they are permanent). Right now the user can still disregard the changes by choosing not to save the package, but if the coverage dialogs are opened and closed multiple times the revision number is incremented each time even without hitting "File|Save...".
