

Morpho - Bug #1396

data package moved/resized when documentation dialogs close

03/25/2004 04:41 PM - Matt Jones

Description Each time one of the documentation dialogs is closed (e.g., usage rights, geo or temporal coverage), the package is reloaded, and therefore the window is moved from the user specified location and resized back to the default size. This is extremely annoying UI behavior -- the user probably had a good reason for putting the window there. If the package must be reloaded (which is slow so we should avoid if possible), then at least we should record the window size and location and reset it on the reloaded package window.			

History

#1 - 03/29/2004 10:18 AM - Dan Higgins

package display is reloaded when there is an indication that something has changed. Code has been modified so that window matches the original window in size and location.
