#### Description

When I display a query result, I always get an error that says:  
"(2,432) java.lang.ArrayIndexOutOfBoundsException: 0>=0". If I click ok, the error goes away, however, a package that is uploaded to metacat only shows (in the query result table) the icon for local. The icons in the package viewer still show it as being local and net (and the package shows up in the web search).

#### History

##### #1 - 03/30/2004 04:53 PM - Dan Higgins

This problem was due to the move of various information about returnfields from the profile.xml doc to the config.xml file. One call to the profile was not updated, causing this ArrayIndexOutOfBoundsException. Changed call to read data from the config file and fixed problem (which was only seen with new profiles which lacked the needed data).
