Description

The text of screen 1 of the DataTable Wizard needs to be formatted like the Data Package Wizard. There is no introductory bold text. The part that says "If you choose this option..." should be changed to "if you choose the second option...". In the 2nd text block, get rid of the "we" and replace it with passive voice (like "...or other files types that are not yet supported.")

The text after the radio buttons is aligned in a very strange way. I think it should just have the word then a space then a dash then a space then the description. The IMPORT radio seems to have several spaces before the dash as does possibly the CREATE radio. I think the red text should say "What do you want to do?" instead of "Where is your data?". The question and the answers just don't match. also, the first radio description ends in a period but the others don't. I think they should all end in a period.
