Description

The format should be changed to match the DPW (bold first sentence). The last sentence of the first text block needs a period.

The wording of the first radio button description, "uses one of a series of delimiters..." is confusing. It should probably say "uses one or more delimiter throughout the file..." or something like that. "one of a series" is confusing.

in the description of the third radio, get rid of the word "object".
scientists don't know what an object is.

when the third radio button is clicked and the additional radio buttons are shown asking the user what format their data is in, the 5th radio "mathematica" needs to be capitalized. In this same selection, the gray text describing MIME types should have at least one more example of a MIME type. I think there are a few more choices that could be entered here as well...MatLab and SAS would probably be good ones.
