Target version:	Postpone	**Spent time:**	0.00 hour
Bugzilla-Id:	1434		

Description

The first screen of the data package wizard cannot be resized without cutting off words (making my screen shot of this screen huge compared to the rest which can be made smaller without cutting off words).

Time cannot be entered in the temporal coverage, although it indicates that it can.

from Andria - using 1.5beta2

Temporal coverage problem is apparently working in latest version.

Font cutoff during resizing not considered a user problem.
