Description

The following is an error reported by Kevin Browne:

.
.

The problem is that the failure message generated is simply

- NULL

I have attached this document so that you can see what is being entered and find a common factor that might be generating an error that is not being handled by the error handler and therefore not telling the user why the error occurred.

.
.

He also sent a word file which I will try to attach with this bug if that is possible.

I looked around a bit - the character causing trouble in this case is '%' sign. I haven't looked into code yet.
