Bugzilla-Id:	1516			

Description

in the main morpho dataset viewing screen, any character that is automatically escaped by morpho (i.e. changed to an &xxx; form) shows up in that form instead of being converted back to its native form. These characters should probalby be changed back for viewing.

History

#1 - 04/20/2004 08:54 AM - Dan Higgins

Interestingly enough, the display used to work OK - really!

It looks like we are now running the normalize method twice so that rather than '&xxx;' we are getting '$amp;xxx;' !!!!

#2 - 04/20/2004 10:01 AM - Dan Higgins

found where 'normalize' was called twice and removed call
