#### Description

This task is for query data object locally (in Kepler). After loading data object into db system (See bug 1584), we need a engine to excute the query which user specifies in UI. This engine will connect db, excute the query and return the data object.

#### History

##### #1 - 01/20/2005 10:24 AM - Jing Tao

We use hsql as sql engine in kepler and use can set a text file as data source. It works fine. The implemenation is in dataquery package.
