<b>Description</b>			
need to switch the EntityResolver from the Oasis XML Catalog to the internal, database-based entity resolver.			

History

#1 - 06/29/2000 06:09 PM - Matt Jones

Fixed DBValidate validation engine so that it now uses DBEntityResolver to resolve system IDs for DTD locations when doing validation. Although it is still possible to use the OASIS catalog system, it is no longer required, and MetaCatServlet no longer uses it. Also, changed output of DBValidate to now produce XML formatted errors to make it easier for applications to utilize the information.
