Description			
closed bug 1106 and opened this one to update it. ----- add functionality to data table xbl so that user is presented with a sampel screen at beginning, nad can assign constant values to any fields. Subsequent screens woudl show these constant values as non-editable labels, possibly in the header area, so user only has to tab thru the fewer remaining input fields when collecting data. These fields woudl possibly be editable by hitting a button in the header to take the user back to the first page dialog again, so he can edit slowly-changing values too.
