<b>Description</b>			
closed bug 1106 and opened this one to update it. ----- for data forms, need mechanism to show/hide relevant metadata, such as type, units, range etc.  Suggestions were:  1) use existing "description" and "example" labels to display this data, and add a button to container to show/hide all these at once (already implemented, except for toggle on/off button. just need to populate labels using rules)  2) show/hide automatically for each individual widget, as focus moves (would make UI fields move up & down, though)  3) click on label to get popup or replacement screen showing this metadata (although Mark p preferred the idea of seeing all values at the same time - not having to click individually. But matt pointed out that the user would become expert pretty quickly, so might need reminding only about the occasional field)  4) show adjacent to each input field, maybe on right side

#### History

##### #1 - 09/01/2004 03:44 PM - Matthew Brooke

implemented suggestion [#1](#) for descriptions - not yet for examples - not sure where to pull these from...

##### #2 - 03/11/2005 11:46 AM - Matthew Brooke

reduced priority - not needed for 1.0.0beta1

##### #3 - 06/15/2005 09:59 AM - Matthew Brooke

essentially done, except for finding a source for example text; changes may be entered as enhancement requests.

Transferring example part to a new bug report - bug [#2126](#)
