#### Description

Need to be able to specify external CSS file(s) in generated UIs, and pull existing CSS styles out of XBL Bindings.

Note that it might be feasible and preferable to avoid the use of rdf files for referencing the CSS, since the whippet webapp (and probably the webclient app) currently have an xml directive:

```
<?xml-stylesheet href="chrome://global/skin/" type="text/css"?>
```

Maybe we could do another of these but with the href="our css href" - which would be customized as a chrome:// url for webclient renderer, or [http:// url](http://url) for the httprenderer. This differentiation is already in place in the renderers - they "know" what their base url is, and set it automatically in the XULFile objects

which pulls in the mozilla default stylesheet.

The stylesheet in the eXUL file can be set thru a method in the XULFile.java class

#### History

##### #1 - 09/01/2004 03:46 PM - Matthew Brooke

done - see chrome/skin/jalama\_library/jalama\_default.css, and the files that @import/override this: httprenderer.css and wcrenderer.css
