<b>Bugzilla-Id:</b>	1637		
<b>Description</b> Design web application for searching EcoGrid.  The search should be able to search multiple nodes at once and present the results in a single set. The search should be able to search more than one format (EML, Darwin) transparently (to the user). Search results should support multiple styles (skins). Possibly have a basic and advanced query inputs, where basic is a single step/screen with one or a few fields and advanced is multiple steps or sets of fields. The search functionality will be similar to Morpho with the significant difference of handling multiple nodes and formats. The EcoGrid Webapp will utilize existing web services (or grid services), which can handle single nodes and a single format.  More details can be found on the SEEK Wiki, EcoGridWeb, EcoGridWebDesign pages.

Have you had a chance to look at the web app I have working that enables the searching of one node?
