

VegBank - Bug #1653

Plot Downloads incomplete for a lot of plots: ASCII

08/10/2004 03:11 PM - Michael Lee

Description			
<p>When I select 1000 plots from MJenning's data and ask for them in ASCII format, I got 680 plots in environmentalData.txt and 0 species in species data. The latter could be because only strata are being exported, or could be incomplete for other reasons... ??</p> <p>Maybe I clicked on the download button too fast? So I tried again and this time I got the blue screen of tomcatness saying root cause of error: root cause</p> <pre>java.lang.OutOfMemoryError</pre> <p>I think it is currently at its highest setting? This is probably due to creating XML then styling it: memory seems unable to handle this huge task.</p>

what about plots with no strata-- need rules to overcome this. Perhaps prefs?
This is not a small request.

#2 - 02/10/2005 01:50 PM - Michael Lee

perhaps 2 files: one file with overall taxa cover, one with cover by stratum.

if there are no strata, provide empty file, well, file with headers only.
Ideally, we would be able to tell user that there was no data and not give them such as file. Maximally ideally, we'd let users specify which they want, but that MAY be more difficult.

fixing bug 2002 will fix this bug too.
