Target version:	1.4	Spent time:	0.00 hour
Bugzilla-Id:	1658		

Description

This is the tracking bug for last minute details for the 1.4.0 release of metacat. Before releasing, we need to:

- 1) Review and revise documentation, including installation instructions
- 2) Check that the harvester code is properly integrated and documented
- 3) Create a function for re-indexing xml_nodes into xml_index
- 3a) make sure the new xml_index with larger path is created in each db
- 4) finish testing access control support for 2.0.1
- 5) change use_xmlindex to 'true'
- 6) develop a test case for inserting and reading both an EML 2.0.0 doc and an EML 2.0.1 doc (the access control tests may satisfy this)
- 7) Update README with appropriate contributors list

History

#1 - 09/14/2004 03:58 PM - Saurabh Garg

4) and 6) done.

Checked that 5) is done.

Working on 2.

#2 - 09/21/2004 03:42 AM - Matt Jones

(3) is now complete -- indexing can be accomplished using the 'buildindex' action by people in the 'adminsitrators' list. Still need to work on (3a) for postgres upgrades by deleting xml_index, recreating it with the larger column, and then repopulating it by running the 'buildindex' servlet target.

(5) is complete -- now the default is usexmlindex=true

(7) is completed

#3 - 09/21/2004 03:49 PM - Matt Jones

(1) is done for now -- its been reviewed and is reasonable accurate, but not perfect. Needs another pass.

(2) is done -- harvester is working according to Sid's tests.

(3a) is done, the table is recreated.

#4 - 09/22/2004 04:25 PM - Matt Jones

All items complete. Version 1.4.0 of metacat is now complete, tested, and released. It is tagged in CVS as METACAT_1_4_0. We will be updating the website and putting the installers on the website shortly, and then will send an email announcing the release. Closing this bug. Yeehaaa!
