Description

When I use morpho to copy a eml2 package from metacat1 to metacat2 and found this problem.

I have a eml2 document - jones.1.3 which has a online data jones.2.1(use ecogrid protocol). I want copy it from metacat1 to metacat2(both eml document and data file). First, I used morpho to point to metacat1 and used synchronize function to download it. I got both jones.1.3 (eml document) and jones.2.1(data file).

Then I changed morpho to point metacat2. No matter I used save or synchronize function, I only can upload jones.1.3(eml document) to metacat2. But I couldn't upload jones.2.1 even it use ecogrid protocol in url.

If we can both upload eml document and data file(use ecogrid protocol) to metacat, it will be better.
