<b>Bugzilla-Id:</b>	1690		
<b>Description</b>			
If one tries to open the Utilites/Decorative item in the Actors menu, Kepler currently locks up. This needs to be fixed since it makes it impossible to add any annotations to workflows!			

#### History

##### #1 - 09/15/2004 02:41 PM - Dan Higgins

problem disappears when the line

```
<property name="Image" class="ptolemy.vergil.kernel.attributes.ImageAttribute"/>
```

is removed from the file "decorative.xml"

##### #2 - 09/15/2004 04:11 PM - Chad Berkley

this was a classpath issue. the \$PTII/doc directory has a bunch of images, one of which is hard coded into the ptolemy.vergil.kernel.attributes.ImageAttribute file using a relative path which included \$CLASSPATH. Since the doc directory was not in the CLASSPATH, the image loader was throwing a NPE in the thread that was trying to locate the image. I fixed it by adding the \$PTII/doc directory to the classpath for the run-dev target. I fixed it in the run target by jaring the \$PTII/doc directory and including it in the classpath.
