Target version:	1.6	**Spent time:**	0.00 hour
Bugzilla-Id:	1698		

Description

Curently, unsecured metacat replication action is easy to break the replication setup. But it couldn't create a new replication without adding certification to metacat java lib.

Actions in MetacatReplication class, such as "start", "stop" and "servercontrol" et al, need be secured. We may use the approach in "buildindex" action in MetaCatServelet class, it only allow administrator can operate this action.

History

#1 - 09/09/2005 02:27 PM - Jing Tao

Add code to get user name and group in MetacatReplication class. Then check if the user name is a admin when action is one of start, stop, getAll and servercontrol. So now only admin user can change those parameters.

#2 - 09/27/2005 05:00 PM - Matt Jones

Changing milestone to reflect its actual release in 1.6
