Description

This mammoth bug is to design a common data model, implement this in XML, get data from NS in this XML format, process the XML to update/add plants and comms and the NS Party Perspective for these.

History

#1 - 09/27/2004 11:01 AM - Michael Lee

Common model designed with Carol, Maggie, and Gwen

#2 - 09/27/2004 11:04 AM - Michael Lee

XML model defined from the common data model and passed to Maggie Woo. See readme file:
http://gyro.nceas.ucsb.edu/~lee/xml/ns/READ_ME.txt
and web dir:
http://gyro.nceas.ucsb.edu/~lee/xml/ns/
particuarly:
http://gyro.nceas.ucsb.edu/~lee/xml/ns/NS_VB_xmlPkg.zip
for information on this.

Maggie has produced this XML from NatureServe data. Need to work out selection criteria on their side and assure that the data in the common XML doc is indeed an accurate representation of the data in NS.

#3 - 01/18/2005 05:06 PM - Michael Lee

Maggie sent us the data, and we've processed it from the common model into our VegBank XML. This is in the queue to load to VegBank.

#4 - 01/21/2005 11:58 AM - Michael Lee

- Bug 1876 has been marked as a duplicate of this bug. ***

#5 - 01/21/2005 11:58 AM - Michael Lee

test xml here:
http://aldo.msi.ucsb.edu/~lee/xml2load/NatureServe_plantComm/test_samples/
real XML next to it

#6 - 02/02/2005 09:08 AM - Michael Lee

this bug no longer deals with the ongoing updates from NS, that's bug 1942

#7 - 03/18/2005 10:58 PM - Michael Lee

NatureServe data loaded (communities)and on vegbank.org. Deep links to NatureServe work, and we've supplied them with the simplest of URL's to come to us (vegbank.org/natureserve/NS_UID
