Bugzilla-Id:	1703			

Description

the spatial bounding box search dialog in morpho does not return any results
even when it should.

Also: The labels on the lat/long text boxes do not match up with the labels on
the xslt stylesheets for the web site. on the web site, the values are labeled
with directions (e.g. 'west') but then use negative values. the labels in
morpho just have a directional indicator but do not use negative values.
